Compliance Management and Permitting Services

Goldman Environmental Consultants, Inc. (GEC) has comprehensive experience in obtaining regulatory permits and developing environmental and workplace safety compliance programs. GEC specializes in conducting facility multi-media audits, developing compliance programs, and creating permit applications for new and existing sources. We have developed applications under the Clean Air Act, Clean Water Act, and the Resource Conservation and Recovery Act (hazardous waste), as well as for the Massachusetts Water Resource Authority (MWRA), Massachusetts Department of Environmental Protection (MassDEP), and the Environmental Protection Agency (EPA).

OUR APPROACH TO COMPLIANCE MANAGEMENT AND PERMITTING SERVICES

GEC develops programs based on clients' needs that work within their existing management structure. This makes our recommendations easy to implement and maintain, leading to greater regulatory success. Our programs are easy to read and conform with reviewing agency requirements, which in turn expedites the application review process. GEC's holistic management approach adds value and is cost-effective. We look beyond the immediate compliance issues to evaluate the current management system and address any deficiencies by recommending the appropriate tracking, reporting, and record-keeping procedures. In addition GEC looks for pollution prevention opportunities that can reduce compliance costs.

GEC'S METHOD

GEC first conducts a facility-wide multimedia audit to provide an understanding of current regulatory compliance and identifies areas with the greatest potential liability. GEC then conducts a detailed review to determine the applicable local, state, and federal regulations. Our clients receive customized programs based on their specific needs and written for their intended audience. GEC provides implementation assistance to ensure the facility achieves full compliance.

GEC develops permits for all major regulatory programs. We determine which permit requirements apply to the facility and identify what information is needed. GEC helps facilities determine what operational and design parameters need to be evaluated prior to permitting. In addition, pre-application meetings with the appropriate permitting agencies can be arranged in order to facilitate the permit process. These meetings provide an excellent opportunity to identify information that is required for the application submittal.

GEC'S EXPERIENCE

GEC has demonstrated success in regulatory compliance and permitting. Our staff expertise is unequaled by other firms and we have provided these services to major manufacturing companies and utilities in New England, as well as to small, medium, and newly emerging manufacturers. Our experience includes metal plating, metal working, electronics, plastic processing, fabric coating, and hazardous waste treatment. GEC helps companies reduce the cost of regulatory compliance by reviewing current operations and developing easy-to-implement programs.
